

Hospital Equipment Tracking Solution

Business Challenges	KeyTone Benefits
<p>High cost of replacing lost assets plus risk of increased liability with lost intellectual property</p> <p>Cycle count and inventory audits are inefficient and error prone</p> <p>Loss of productivity caused due to time spent in searching misplaced assets</p> <p>Inconsistencies in asset records lead to non-compliance to various industry regulations (HIPAA, JCAHO, FSMA)</p>	<p>Automated check-in/check-out and monitoring dashboard provide real time asset visibility</p> <p>Perform quick and accurate cycle count and asset inventory with RFID mobility solution</p> <p>Locate misplaced assets quickly with greater accuracy</p> <p>Complete traceability of each and every asset moving in or out of the facility</p>

Overview

A typical equipment infrastructure of a hospital consists of wheel chairs, mobile beds, monitoring devices and laboratory test equipments which are distributed across various locations. Some of these assets are shared, others require periodic maintenance and there are assets that are assigned to authorized users. Asset managers are faced with a daunting task of managing asset inventory to ensure its availability and maintain up to date inventory to meet industry compliance (JCAHO, HIPAA, FSMA and others). As medical devices takes an increasingly important role in patient care, hospitals are beginning to realize the limitations of barcodes and existing asset management to manage these medical assets.

Solution

KeyTone's hospital asset tracking solution is an out-of-the-box solution that provides:

- Real-time visibility of all medical assets checked-in or out of your physical area based on hospital's policies
- Reduces manual tasks by automatically recording asset inventory and its usage life cycle with near seamless integration with existing asset management software
- Monitor high value life-critical assets throughout the facility
- Meet government and industry regulatory requirements with detailed audit trail

KeyTone solution provides comprehensive asset visibility reports and dashboard with complete audit trails and accurate asset inventory - delivering the highest level of confidence in asset usage reporting and regulatory compliance.

Hospital Equipment Tracking Solution

KeyTone provides operational business intelligence through web based dashboard and many pre-defined reports.

Asset violation report

Report provides a list of all the asset violations and exceptions that occurred in a given time period. Example – a given asset is checked out without its accessories.

Asset overdue report

Report provides list of all the assets that are overdue in a given a location along with the check out details.

Asset movement report

Report provides users with a complete history of an asset's movement and the time stayed at each location.

Check-in report

Daily report which provides a list of assets that are expected to be checked in.

Decommissioned asset report

Report that provides a list of all assets that were de-commissioned from operations in a given time period, by location.

Asset addition report

Reports all the asset that were added to the current inventory by location in a given time period.

Asset Usage report

Reports the utilization of one or more assets based on user defined criteria.

Asset inventory report

Report provides a complete inventory of all assets, by asset types, at a chosen location for a given time period.
