DOD RFID Adoption

Our goal is to help companies reduce the time required for RFID adoption and quickly benefit from the technology. KeyTone' DOD Compliance suite has tools and applications especially designed to overcome implementation challenges with ease. The DOD Compliance Suite minimizes the total adoption cost by seamlessly integrating with existing systems and processes.

The KeyTone DOD Compliance Suite guarantees quick compliance and provides a roadmap to realize RFID benefits across the enterprise, thereby reducing your total cost of ownership of RFID adoption.

DOD Compliance Suite Overview

Successfully meet the DOD RFID mandate and leverage the investment in RFID by deploying a solution that will scale with the demands of shipping all containers to the DOD with RFID tags.

- Achieve compliance within weeks instead of months
- Integrate RFID into your current operations with minimal disruption to current systems and processes
- Directly send shipment information to the WAWF reducing the time taken to capture the RFID information and submit to DOD

The DOD Compliance Suite works with

- Any label printing software
- Any ERP or WMS
- Any RFID hardware

The KeyTone DOD Compliance suite is extremely flexible to use and adapts to any pick-pack-ship process

You can reduce labor by directly sending RFID shipment data to the DOD WAWF.

Gain accuracy in shipping by additionally verifying RFID tags through fixed and mobile readers.

Features of the DOD Compliance Suite

UID creation

The Compliance Suite provides the ability to create DOD specified UID's for products being shipped to the DOD. The software's product catalog has a wizard driven approach to deciding whether products require a UID.

Automated Order Processing

The Compliance Suite provides the ability to import order data from existing systems in addition to manually creating shipment orders. This enables the software to scale with the increase in shipments

RFID tag encoding and printing

The Compliance Suite supports the printing of shipping, outer, inner and item labels. It provides out of the box DOD specified shipment label templates

Containerize

The Compliance Suite supports the containerization of shipments. This enables the creation of shipment data for WAWF that includes the outer, inner and item level RFID tag data in the order of packing. This ability to specify the sequence of packing is a requirement from the DOD.

Verify

The Compliance Suite provides flexible RFID tag verification. Users can create multiple verification points within the DC and not only verify the contents of the shipping container but also reconcile it with the order to ensure the data being uploaded to WAWF for the order is accurate.

WAWF shipment data uploads

The Compliance Suite provides the ability to generate order shipment files that can be uploaded to the WAWF via FTP. This automated file generation enables users to seamlessly notify the DOD of all RFID shipments
